Figure 7: The link between socioeconomic development, TB and TB care

SOCIOECONOMIC DEVELOPMENT

Reduced prevalence of poverty, social marginalization and poor living conditions

Improved nutrition status and housing

Reduced susceptibility to infection and disease

1. Reduce risk of TB

Education, empowerment, appropriate demand

Ability to use health services rationally

2. Access and rational use

Increased financial and human resources for strengthening health care systems

Increased availability of quality services for TB

3. Availability of quality TB care
