The Stop TB Partnership is leading global advocacy efforts to put the world on track to end TB by 2030. We work closely with our 1600 partners to ensure TB is at the top of the global political agenda.

The Stop TB Partnership led the campaign for governments to hold a UN High-Level Meeting (HLM) on TB. Dr. Motsoaledi as Chair of the Stop TB Partnership Board and Minister of Health, South Africa first called for an HLM at the UN General Assembly in 2016. Together with our partners, we successfully campaigned for TB to be recognized in the G20 Heads of State and Ministers of Health Declaration in 2017, the first time TB has been recognized by the G20. We unite and empower people affected by TB, civil society, and communities by giving them a voice, platforms, and visibility. We coordinate the annual World TB Day on 24th March to raise awareness about the burden of TB globally. The Global Plan to End TB 2016-2020 and the 90/90/90 TB targets, widely endorsed by Heads of State and Health ministers, show our way to end TB through the political agenda, mobilize resources, and translate the Global TB Response.

STRENGTHENING COMMUNITIES

People affected by TB and communities must be at the heart of all efforts to end TB. Stop TB works in the following areas: Supporting community engagement through the Challenge Facility for Civil Society (CFCS) a grant programme to support community engagement, ensuring TB programmes are centred on human rights, gender-sensitive interventions, and increasing access to quality TB services; and investing in strengthening community systems and responses to the challenge of drug-resistant TB.

Stop TB provides support to country programmes.

WHO WE ARE

The Stop TB Partnership is a unique international body, which is a part of the United Nations family, that aligns all actors over the world to end TB. The Stop TB Partnership ensures a voice for the TB community at the highest levels. Various programmes identify and fund innovative approaches to find, treat and cure people affected by TB.

Stop TB Partnership plays a key role in procuring TB drugs and diagnostics, including the first successful broad-based procurement of XDR-TB drugs, reducing prices, improving forecasting, and preventing stock-outs for drugs.
TB REACH is a multi-lateral funding mechanism which provides grants to partners for testing innovative strategies and technologies aimed at increasing the number of people diagnosed and treated for tuberculosis (TB). To encourage fast-track, results-based financing and rigorous, external monitoring and evaluation (M&E) to produce results, the international community acknowledged the lead role of the Stop TB Partnership in 2018.

GLOBAL DRUG FACILITY
The Global Drug Facility (GDF) is a one-stop, bundled procurement and supply mechanism for quality assured TB health products aimed at facilitating world-wide, scalable access to TB medicines and diagnostics across both public and private sectors.

STRATEGIC INITIATIVES & INNOVATIVE FINANCING
Strategic Initiatives & Innovative Financing’s (SIIF) primary mission is to develop and launch innovative strategies and technologies aimed at increasing the number of people diagnosed and treated for TB. SIIF leverages the business sector’s expertise and resources, and private sector capital to pool and blend both private and public sector capital to scale up successful approaches and maximize their impact.

ADVOCACY
Situated in the high-level network of the Global TB Caucus, TB REACH made New TB Drug Milestone
Chair of the Board
600 heads of state recognized TB drug resistance as one of the most challenging global health threats leading the role of the Stop TB Partnership.

STRENGTHENING COMMUNITIES
TB REACH supports communities and civil society organizations to strengthen community systems.

DONORS IN 2017
2017 TB REACH GRANTEES DIAGNOSED AND TREATED
Over 3 million people with TB, were reached in 2017 through more than 100 TB REACH grants.

TB REACH REACHES 416 million people with TB health products.

TB REACH REACHES 416 million people with TB health products.
