Stop TB Partnership

© WHO WHO/HTM/STB/2009.53

GDF, the Stop TB Partnership and WHO's mandated procurement mechanism for anti-TB health products, provides a comprehensive range of the WHO-approved anti-TB medicines and supplies needed to diagnose and treat both adult and paediatric patients infected with drug-sensitive and drug-resistant TB.

GDF contracted suppliers of TB drugs under the Grant and Direct Procurement Services are selected via competitive processes that ensure that all drugs to be supplied are either prequalified under the WHO Procurement, Quality and Sourcing Programme: Access to Anti-Tuberculosis Drugs of Acceptable Quality (WHO Prequalification Programme), have GMP from a stringent national regulatory authority or are approved for supply through a transparent, independent expert committee and are pending WHO Prequalification.

2nd Line Drugs

Product	Description	Pills/Vials/ Kits
MDR Am 500 mg powder for inj	Amikacin 500mg powder for injection - 20 vials box	20
MDR Cm (A) 1gr vial	Capreomycin 1gram powder for inj vial	1
