

Rapid detection of *Mycobacterium tuberculosis* complex from sputum samples using novel Loop-Mediated Isothermal Amplification

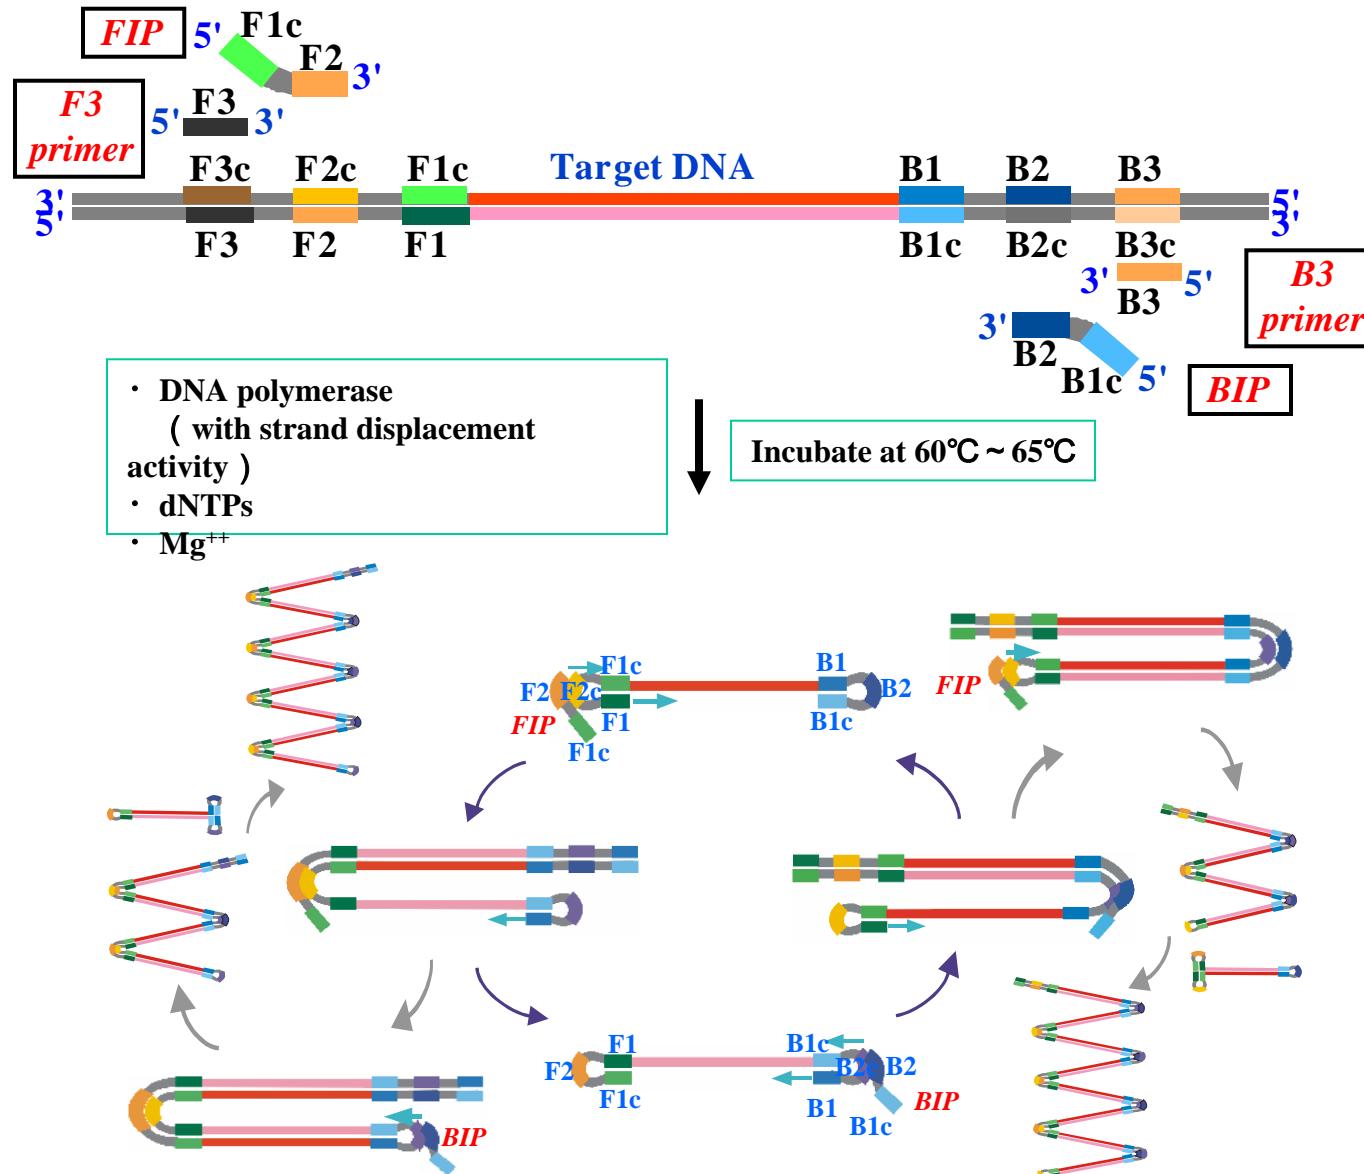

Tetsu Hase, Ph.D.

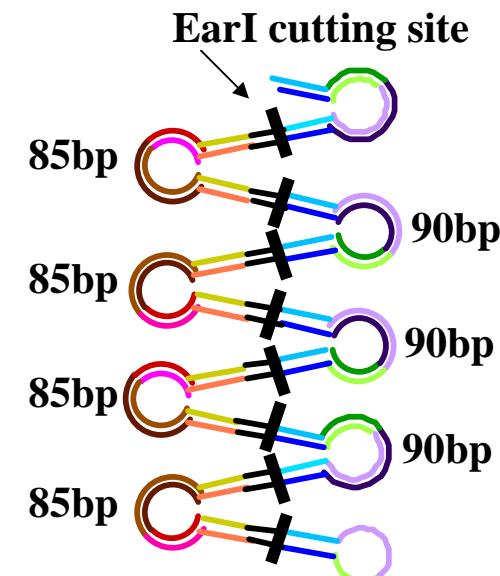

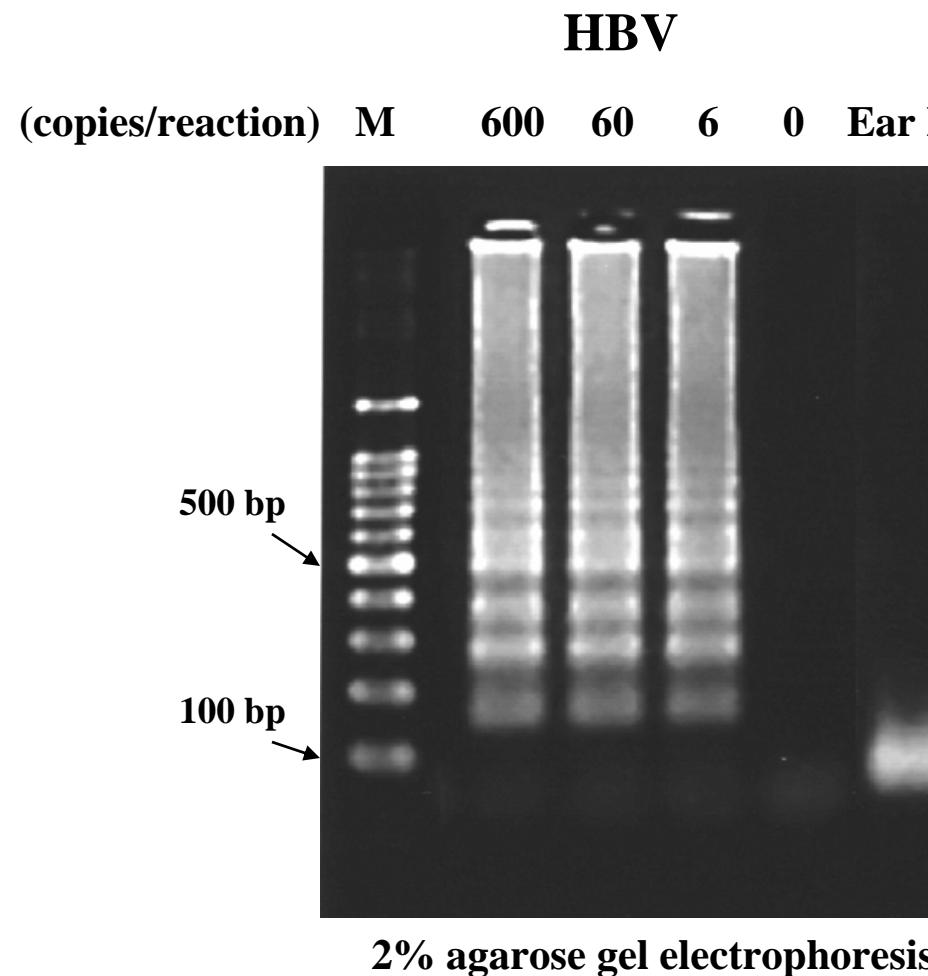

EIKEN CHEMICAL Co.,LTD.

Basic principle of LAMP method

Mechanism of LAMP reaction

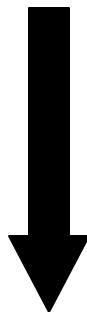

Products of LAMP reaction

Procedure of LAMP method

- Target DNA
- Primers (FIP, F3, BIP, B3)
- DNA Polymerase with strand displacement activity
- dNTPs
- Buffer solution

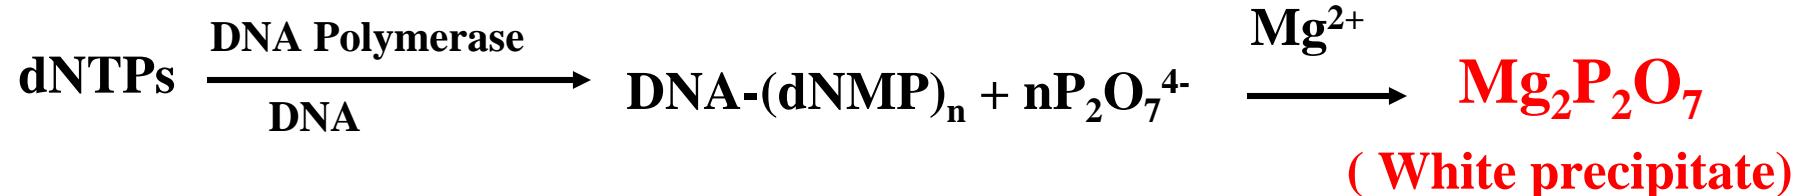

60 – 65C

15 - 60 min.

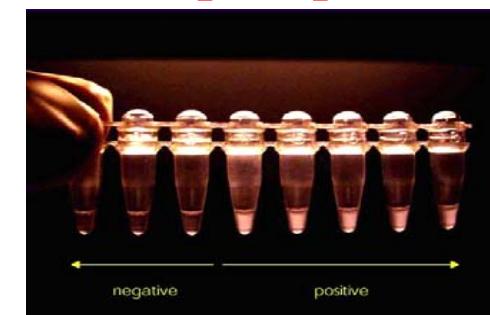

Detection

- Simple
- Rapid (high efficiency)
- Specific (high specificity)
- Cost effective

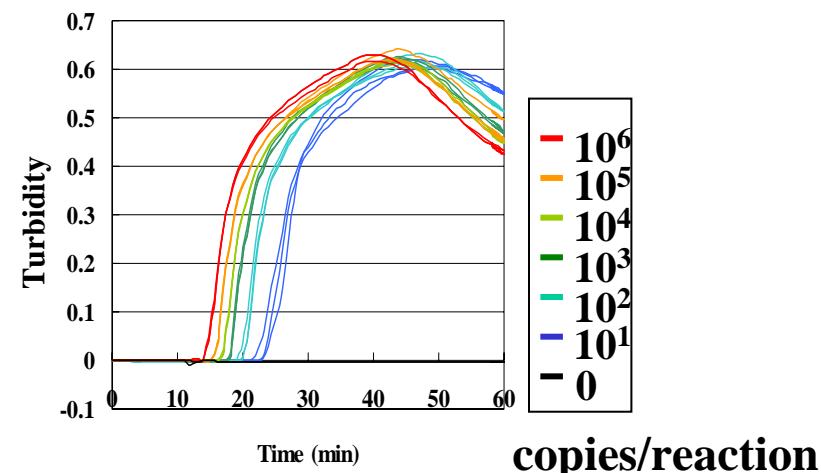

Detection -Turbidity -

<Real time monitoring>

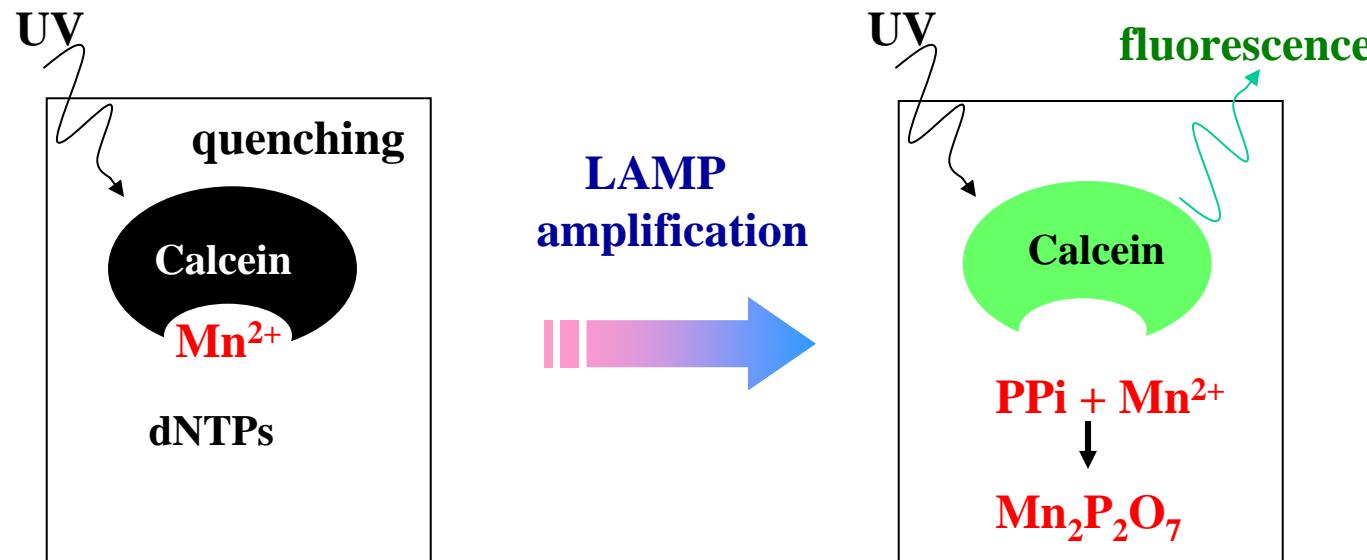

Real-time turbidimeter
LA200

Purified HBV genomic DNA was used as a template.

Detection - visible fluorescence -

<Instrument for the detection>

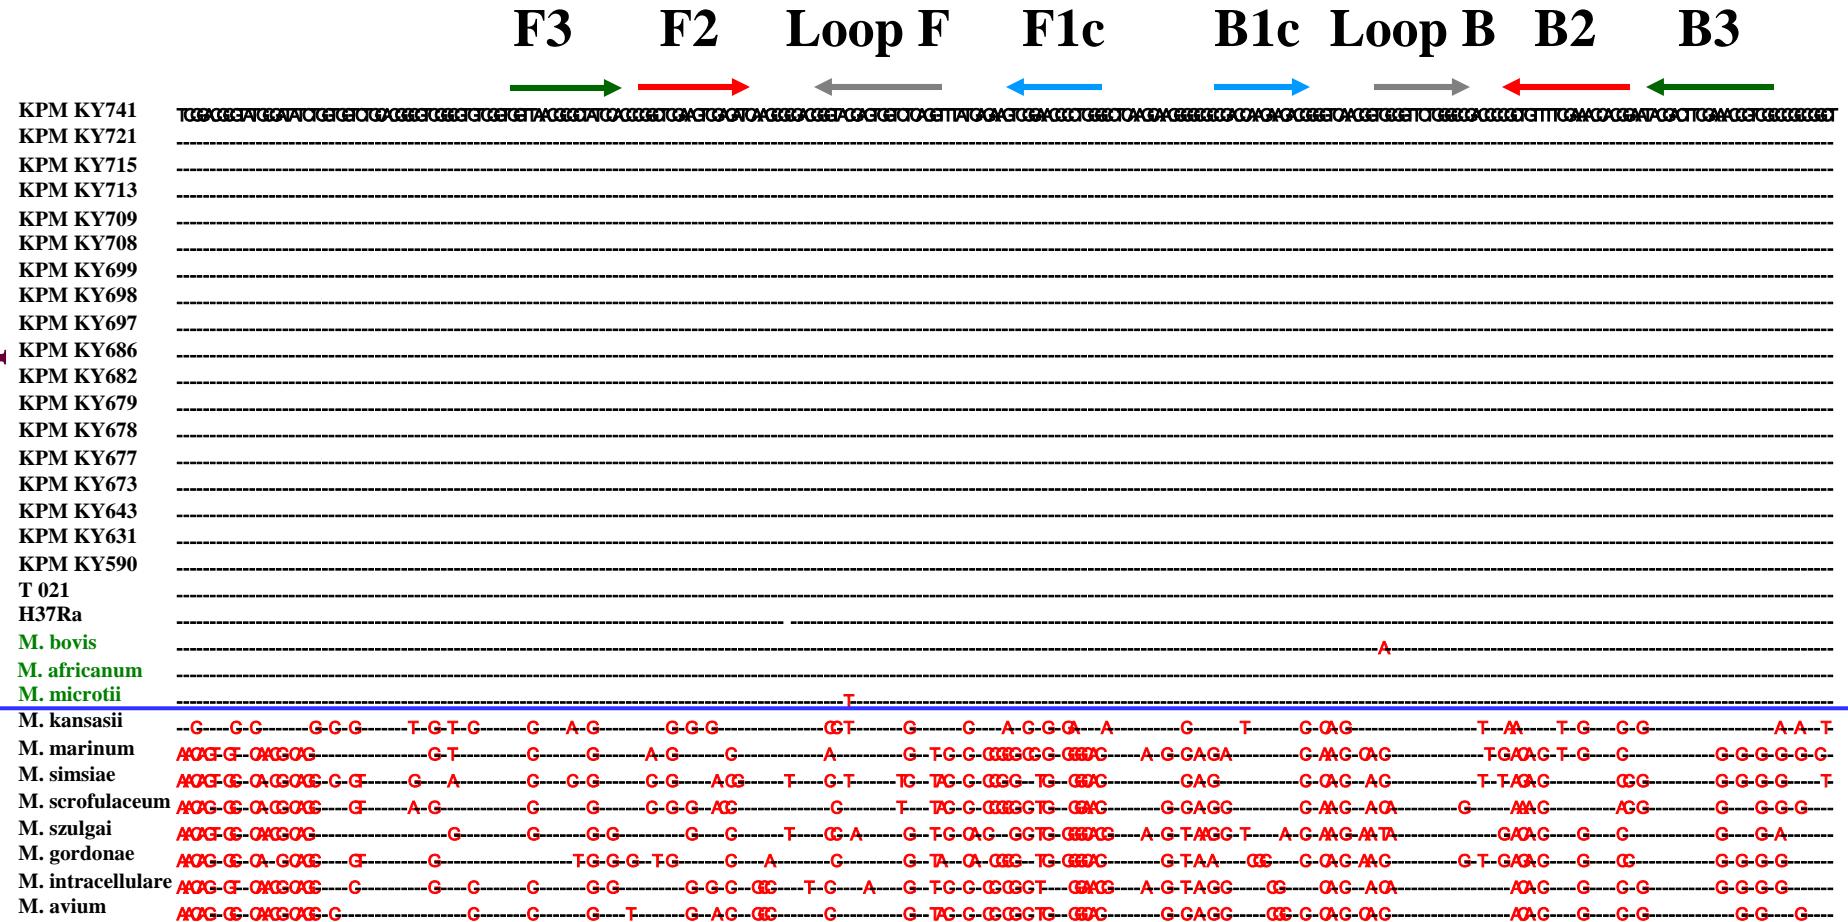

- + (TB)

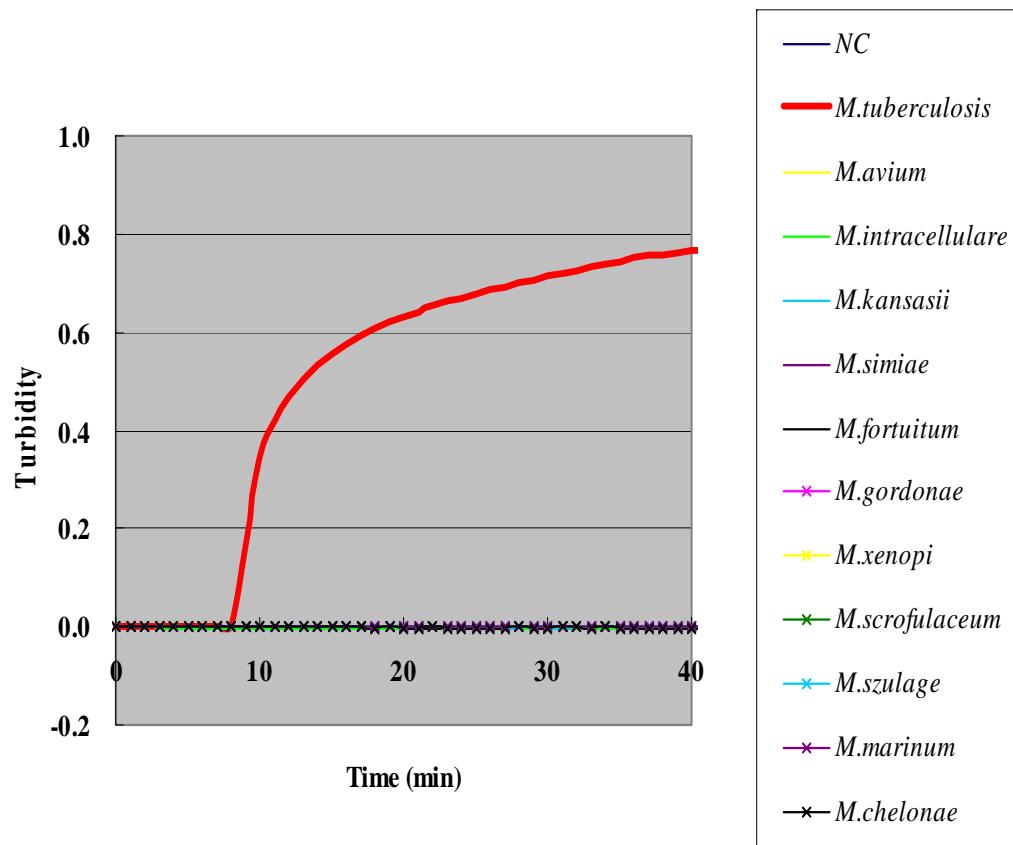

Development of LAMP assay for detection of Mycobacterium tuberculosis complex (TB-LAMP)

Multiple alignment of LAMP primer region of *Mycobacterium gyrB* gene

TB complex

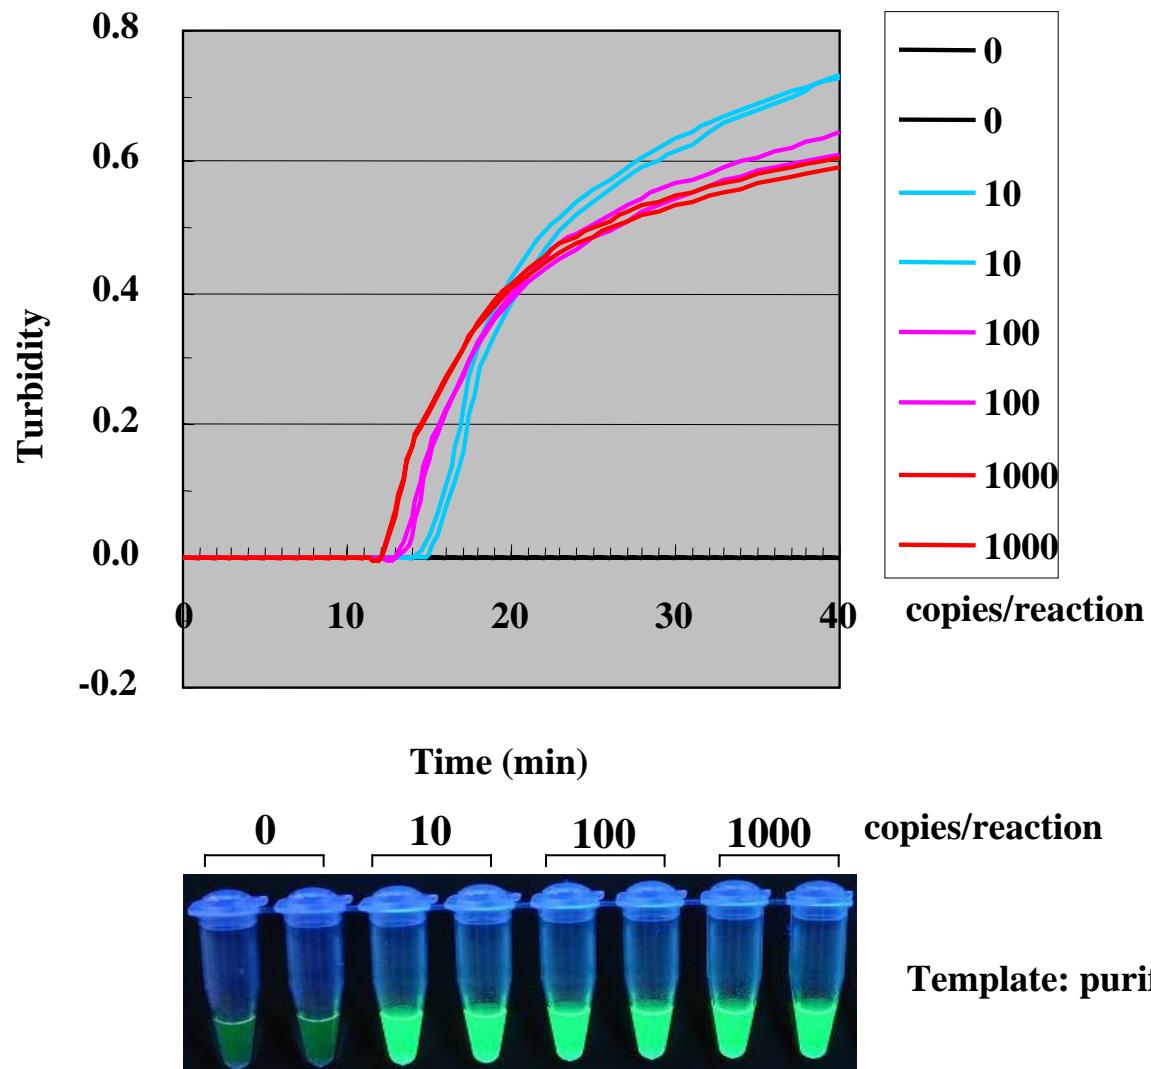

Analytical specificity of TB-LAMP

Template: purified genomic DNA (10^6 copies/ reaction)

Analytical sensitivity of TB-LAMP

Whole Procedure of TB-LAMP

Sample preparation

Decontamination of sputum sample with NALC-NaOH

Boiling of the sample to lyse bacteria

Purification of DNA using Extraction device

Extraction device

Amplification

Detach the DNA-trapped Microweb tip into the reaction mixture containing Calcein reagent

LAMP reaction at 65C for 40min

Detection

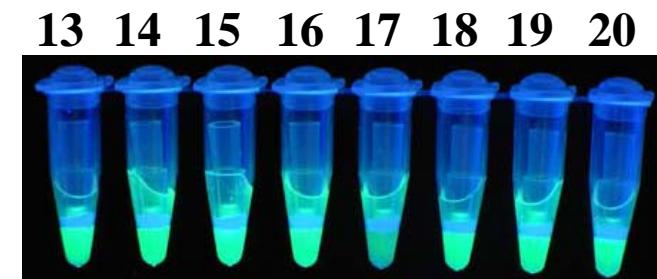

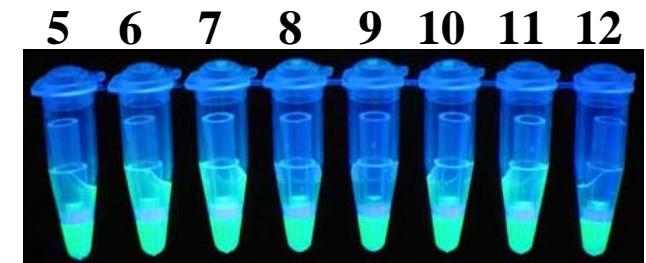

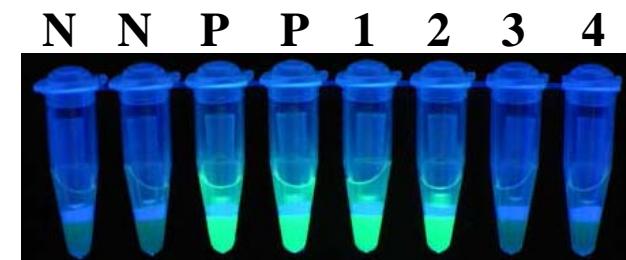

Detection of visible fluorescent signal

Microweb tip

TB-positive specimens

Summary of Preliminary Data of TB-LAMP

		TB-LAMP		
		+	-	
Amplicor	+	18	2	20
	-	0	25	25
		18	27	

- a) Results of TB-LAMP showed good correlation with the Amplicor's results.
- b) Concordance rate of TB-LAMP indicating TB-positive was 90% (18/20; with Amplicore positive samples).
- c) Results of TB-LAMP gave good agreement with the results of Amplicor (25/25; in case of smear negative samples).

Evaluation of Direct method with sputum specimens

NALC-NaOH			Direct method				
	+	+/-	-	+	+/-	-	
Culture -	0	1	9	0	3	7	10
Culture +	36	0	2	34	1	3	38
	36	1	11	34	4	10	

- a) In general, Direct method showed good correlation with the NALC method.
- b) There were a few samples, which showed discrepant results which could have been due to the following reasons.
 - interference with the fluorescence signal by Haeme
 - non-homogeneous samples and insufficient samples
 - false labeling of the samples
- c) Eiken shall investigate further samples.

Conclusion

TB-LAMP assay provides:

- **Rapid:**

Results can be obtained within two hours including DNA extraction.

- **Simple:**

**Whole assay procedure is very simple and easy to operate.
It does not require any sophisticated equipments.**

- **Specific:**

It detects TB complex specifically (no cross reaction with NTB).

- **Sensitive:**

10 copies of TB DNA can be detected.

EIKEN will contribute to the global health through LAMP based diagnostic tools.

Acknowledgment: We would like to express great appreciation to FIND for providing us precious samples and valuable advise.
