

**The International Hospital Federation (IHF) online tuberculosis manual toolkit for hospital decision-makers** available on CD-ROM and at: <http://www.ihf-fih.org/toolkit/index.html#PageReady>

Creation of this training material is the outcome of IHF's belief that there should be full involvement by healthcare facility decision makers and managers in the operational strategy and implementation of MDR-TB management and control programmes within hospital and healthcare settings particularly in low and middle-income countries.

This training material is one of many activities being undertaken by the IHF as part of its four-year (2008-2011) Phase II bilateral partnership programme, sponsored by the Lilly MDR-TB Partnership.

**The International Hospital Federation (IHF)** is the successor to the International Hospital Association, established in 1929, and is an international non-governmental organisation, supported by members from over 100 countries. As the worldwide body for hospitals and health care organisations it develops and maintains a spirit of cooperation and communication among them, with the primary goal of improving patient safety and of promoting health in underserved communities. The Federation is in official relations with the World Health Organization.
