Twenty years since birth of child TB working group in Paris

If I have seen further than others, it is by standing upon the shoulders of giants.

Childhood tuberculosis in Malawi: nationwide case-finding and treatment outcomes

A. D. Harries,* N. J. Hargreaves,** S. M. Graham,†† C. Mwansambo,§ P. Kazembe,§ R. L. Broadhead,‖ D. Maher,* & F. M. Salaniponi*

* National Tuberculosis Control Programme, Community Health Science Unit, Private Bag 65, Lilongwe, Malawi; † Liverpool School of Tropical Medicine, Liverpool, UK; ‡ Wellcome Trust Research Laboratories, Blantyre, § Department of Paediatrics, College of Medicine, Blantyre, ‖ Paediatric Department, Lilongwe Central Hospital, Lilongwe, Malawi; * Stop TB Department, World Health Organization, Geneva, Switzerland

SUMMARY

SETTING: All 43 non-private hospitals (three central, 21 district and 19 mission) in Malawi that register and treat those aged 1–4 years and 33/100 000 in those aged 5–14 years. A significantly higher proportion of TB cases was observed in children aged 1–4 years compared with 5–14 years.

The natural history of childhood intra-thoracic tuberculosis: a critical review of literature from the pre-chemotherapy era

TB Speed – over 2000 children with severe pneumonia in five countries

CONTACT – cluster randomized trial of decentralized child contact management

“The biggest difference since we set out on this journey is the scientific basis for childhood TB that has been established. In the early days we were advocates with minimal data. This can no longer be held against the childhood TB group.”

Anneke C. Hesseling
Director - Distinguished Professor in Paediatrics and Child Health

Ficus natalensis

“The beautiful growth of this tree is symbolic of what has happened to childhood TB.” Robert Gie

Commonly known as the natal fig in South Africa.

In central and western Uganda, it has important cultural value and is known as omutuba to the Baganda people.
